

State of Cybersecurity

2024 and Beyond

The majority of cybersecurity professionals say their roles are increasingly stressful—in large part due to a threat landscape that continues to become more complex. ISACA, a global professional association advancing trust in technology, surveyed more than 1,800 cybersecuirty profesionals—including 413 in Europe—to examine the state of cybersecurity in 2024 and beyond, from skills gaps and hiring plans to threats and budgets. For full results, visit www.isaca.org/state-of-cybersecurity-2024.

Cybersecurity Professionals Are Stressed say their role is **more stressful** now than five years ago

Threat landscape is increasingly complex. (79%)

Budget is too low. (45%)

TOP REASONS FOR INCREASED STRESS:

Hiring/retention challenges have worsened. (47%)

Staff are not sufficiently trained/skilled. (40%)

Cybersecurity risks are not prioritized. (32%)

to explore ways to support staff before burnout and attrition occur. Employees want to feel valued. As the leadership adage goes, take care of your people and they'll take care of you. JON BRANDT • Director of Professional Practices and Innovation, ISACA

Employers should home in on occupational stress for their digital defenders. Take the opportunity

Cybersecurity Job Openings Are Declining

are understaffed, hiring has slightly slowed:
